## Senior Backend, Javascript, Node.js Engineer in San Francisco, CA at OSI Engineering

San Francisco, CA 94119

[Report this job](#)

### About the Job

An experienced back-end Sr. Software Engineer to work on back-end applications and infrastructure. You'll help ensure that REST API services are always fast, available, scalable and engineered to scale. You'll join a team of industry experienced engineers to develop, maintain, debug, optimize core internal systems and other miscellaneous services. You will work in collaboration with the mobile, web, and embedded development teams to optimize the overall user experience.

#### Responsibilities:

- Development, maintenance, and debugging of back-end services
- Manage availability, security, scalability by engineering reliability into our services
- Monitoring operational services and responding to problems when necessary
- Preemptively work on improving the performance of our REST API
- Participate in service capacity planning
- Review and influence ongoing backend designs and architecture

#### Must-Have Skills:

- 8+ years professional software development experience.
- 4+ years experience managing, developing and scaling large scale back-end systems
- 3+ years experience developing in Javascript for nodejs, you use jslint and node-inspector
- 1+ years experience developing with mongodb
- 4+ years developing system backed by databases (NoSQL or SQL)
- Extensive understanding of REST APIs and hands-on experience using them

#### Preferred Qualifications:

- REDIS, RabbitMQ, Restify
- UNIX, bash fluency

**Location:** San Francisco, CA - Office in SoMA
